DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3, drawn to non-thermal decomposition and pasteurization of organic process material by electroporation, classified in class 99, subclasses 358 and 451 and also classified in class 426, subclasses 107, 234 and 237.
 - II. Claims 4-9, drawn to an apparatus for utilizing electric field, classified in the following classes: class 250, subclasses 386-387; class 210, subclasses 243, 748 and class 422, subclasses 186.04 and 186.05.
2. Inventions 1-3 and 4-9 are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to perform process other than non-thermal pasteurization of organic process material as required by the method claim; for example for non-thermal electrical treatment of air stream or solids such as rocks.
3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
